

CONNECTING SOFTWARE

Sustainability Statement

At Connecting Software, we understand and appreciate the significance of sustainability within the software development sector. We recognize that our work - while digital in nature - carries a real-world environmental footprint, from the energy consumed by our servers to the lifecycle of the hardware we use, and even to the efficiency of the code we write.

Software development is at the heart of the digital transformation that shapes our world, and we firmly believe that this transformation must be environmentally friendly, socially responsible, and economically viable.

By integrating sustainability principles into our business strategy, we strive to reduce our environmental footprint, contribute to our communities, and add value to our customers in a manner that respects the limits and opportunities of our planet.

We acknowledge the energy consumption related to our operations and are committed to reducing it. This involves optimizing our code to be as efficient as possible, reducing server load, and investing in green hosting solutions.

Our office environment is designed with sustainability in mind, leveraging renewable energy sources like solar panels and implementing energy-efficient lighting and cooling systems, and our management leads by example, opting for electric vehicles for their personal and business travels.

Our hardware procurement strategy prioritizes energy-efficient devices and a responsible e-waste management system. Our innovative solutions, such as our blockchain technologies, are developed with an environmentally friendly approach, utilizing economic batching of hashes to minimize carbon output.

Moreover, we value the importance of responsible supply chains and choose our partners based on shared sustainability values. We believe in the importance of social responsibility and uphold the highest standards in our business conduct, promote a diverse and inclusive workplace, and support our local communities.

We are transparent and honest about our sustainability journey, and we remain committed to improving our practices continuously.

At Connecting Software, we are committed to making sustainability the core of our business, innovating software solutions that not only meet the needs of our customers but also contribute to a more sustainable world.
