Success Story

Connecting Software and Querco Fagetea Introduce Blockchain Technology for Transparent Natural Assets

Querco Fagetea (QF), a pioneer in sustainable natural asset management, has significantly advanced the transparency and reliability of environmental data by partnering with Connecting Software. This collaboration addresses one of the critical challenges in ecosystem valuation: ensuring the integrity and traceability of environmental data underpinning sustainability strategies and green finance initiatives.

Truth Enforcer: Guaranteeing Integrity in Natural Asset Valuation

At the center of this groundbreaking partnership is [Truth Enforcer](#), a blockchain-driven platform developed by Connecting Software. By embedding an immutable, timestamped seal on every data entry, Truth Enforcer guarantees the authenticity and auditability of environmental information such as CO₂ storage, biodiversity, water retention, and air purification.

Querco Fagetea applies rigorous, scientifically recognized standards to quantify forest-based ecosystem services. However, validating this information for use in corporate ESG reporting or sustainable investing requires a trusted system to prove that data has not been altered or manipulated. With the implementation of Truth Enforcer,

QF successfully ensured the tamper-proof documentation of measurable ecosystem services, providing stakeholders—including businesses, investors, and governments—with verifiable insights into their environmental impact.

Setting a New Standard for Sustainability and Green Finance

“Transparency and trust are essential in environmental markets,” explained Thomas Berndorfer, CEO and founder of Connecting Software. **“By integrating blockchain technology, we provide a secure and immutable infrastructure to track, verify, and monetize ecosystem services.”**

The partnership arrives at a crucial moment in the evolution of sustainability frameworks. While mechanisms like the EU Emissions Trading System have long supported carbon credits, QF’s introduction of scientifically backed “nature credits” offers a broader and more holistic approach to environmental protection. By coupling these credits with blockchain-sponsored

Success Story

Connecting Software and Querco Fagetea Introduce Blockchain Technology for Transparent Natural Assets

traceability, Connecting Software and QF are redefining standards in the environmental asset market.

“Businesses are seeking credible sustainability solutions,” said Pascal Frank, Managing Director of Querco Fagetea.

“Our work introduces a tamperproof approach to natural asset management, setting a benchmark for trust and accountability in green finance.”

This successful implementation marks a significant milestone in natural capital accounting. By securing natural asset data with Truth Enforcer, Querco Fagetea enables a transparent foundation for corporate sustainability strategies, risk evaluation, and responsible investment—paving the way for a data-driven, trustworthy green economy.
