Press release from: [Connecting Software](#)

GovWare Conference & Exhibition 2024

Denver, October 15, 2024

Connecting Software is pleased to announce its participation in the GovWare Conference & Exhibition 2024, Asia's premier cybersecurity event, taking place from October 15 to 17 at the Sands Expo and Convention Centre, Singapore. This prestigious event is supported by the Cyber Security Agency of Singapore and is a key part of the renowned Singapore International Cyber Week. With over 12,000 participants from across the globe, GovWare is where "cyber truly means business."

Connecting Software, in collaboration with ST Engineering, will present an air-gapped synchronization solution designed to protect government and enterprise networks. This solution integrates ST Engineering's data diodes and cybersecurity expertise with Connecting Software's advanced synchronization technology to deliver secure and seamless data synchronization across critical IT systems, namely Microsoft Exchange Servers.

The solution will be featured for the first time at GovWare 2024. It enables secure synchronization of Microsoft Exchange servers while maintaining air-gap protection for critical networks, providing an essential layer of defense to prevent hackers from using Exchange Server as an entry point for cyberattacks. This way, the solution addresses a vital security need while ensuring the connectivity that modern-day professionals require.

"We look forward to growing our partnership with ST Engineering to provide market-leading synchronization solutions across the spectrum of critical IT systems used by governments and enterprises, bringing together the best of both organizations to secure our clients' networks," noted Thomas Berndorfer, CEO of Connecting Software.

GovWare 2024 provides an essential platform for decision-makers, cybersecurity practitioners, and industry leaders to align cybersecurity strategies with broader business objectives. Connecting Software invites all participants to join them at their booth to explore how these solutions can safeguard their organizations while enhancing productivity.
